Notes:

Reported intercepts are core - lengths; true width of mineralization is unknown at this time.

Unless otherwise indicated intercepts constrained with a 0.25 g/t gold minimum cut-off grade at top and bottom of intercept, with no upper cut-off applied, and maximum of five (5) consecutive metres of internal dilution (less than 0.25 g/t gold). All internal intervals above 15 g/t gold indicated.

- (1) Intercept encompasses 11.0 metre essentially barren interval (0.03 g/t Au) appearing to reflect a post mineralization dyke (130 m - 141 m).
- (2) Hole #KBDD11134 drilled down the plunge of Big Bend Zone en-echelon vein package system; Length weighted average grade for entire hole including internal dilution (i.e. no internal waste criteria applied).
